What is Workers' Comp:

[Workers' Compensation](#), also known as Workman's Comp, is business insurance that provides for the medical care for workers who suffer work related injuries or illnesses and also provides for lost wages due that arise when the employee is injured and cannot work.

Workers' compensation protects both the employer and employee. Employers are protected when they need to pay for and employee's work-related injuries or illnesses. It protects employees by providing indemnity for lost wages arising from work-related loss or injury.
